1 Introduction

Skills for Health is the Sector Skills Council for the health sector. One of our key activities is the development of skills and labour market intelligence, the aim of which is to help employers understand their current and anticipated future skills needs. It is one of 23 such councils, who together generate skills and labour market intelligence for over 90% of the United Kingdom's workforce.

Skills for Health cover all those working in the sector; public, independent and voluntary. The sector can be technically defined using the 2007 Standard Industrial Classification. A breakdown of the technical codes for the sector and SSC can be found in the Glossary.

The Common Labour Market Intelligence (LMI) Framework, established by the UKCES in 2009, requires all Sector Skills Councils to produce annual Sector Skills Assessments.

This regional briefing is part of an ongoing suite of reports published by Skills for Health. These include:

- UK Sector Skills Assessment Full Report
- UK Sector Skills Assessment Summary Report
- England Skills and Labour Market Intelligence Report
- Scotland Skills and Labour Market Intelligence Report
- Wales Skills and Labour Market Intelligence Report
- Northern Ireland Skills and Labour Market Intelligence Report

The data in this briefing is drawn from a range of secondary data sources including the UK Labour Force Survey (LFS), Annual Business Inquiry (ABI)¹, and the Office for National Statistics (NOMIS). These are robust sources of data that allow us to look at labour market information across all sectors of the UK economy, including the health sector. There may be slight variations in the data due to the differences in the purposes and time frames of the surveys. Where we consider the data is less reliable, or analysis should be treated with caution, this is highlighted within the text. This briefing also draws on commercially available intelligence that profiles the health of the East Midlands and England as a whole.

These briefings are just one of a wider suite of outputs we are developing, which includes research on a range of themes important to the sector. Details of our activities and reports can be viewed at www.skillsforhealth.org.uk/workforce-design-development/workforce-strategy/skills-labour-market-intelligence.aspx.

¹ Data quality: The ABI is based on a sample survey so estimates are subject to sampling errors which need to be taken into account when interpreting the data.

2 Key Facts

- There are 129,300 people employed in the health sector in the East Midlands
- The East Midlands accounts for 8.5% of the England health sector workforce
- The sector accounts for 6.8% of the region's employment. Subregionally the percentage ranges from 2%-12%
- There is 1 health employee for every 34 people resident in the region and 1 health establishment for every 1,167 resident population. Subregionally this ratio ranges from 1 employee for every 15 up to 131 people and 1 establishment for every 975 up to 1,615 people
- The Independent Sector accounts for approximately 22% of the total health sector workforce
- The sector is highly feminised – 81% of the workforce are female compared to 49% in the local economy
- Part-time workers account for 44% of the workforce compared to 32% in the local economy
- 57% of the health workforce are qualified to NVQ Level 4 and above compared to 30% in the local economy
- 19% of health establishments report skills gaps in their current workforce
- 44% of the health sector workforce qualified to NVQ Level 4 and above report having received training in the past 13 weeks compared to 26% of those qualified to below NVQ Level 2
- In the East Midlands, 60,000 people are expected to retire from the health sector between 2007 and 2017

3 A Profile of Demand for Healthcare in the East Midlands

Key Features

- The largest health group within the East Midlands is 'healthy'
- The largest health type is 'affluent towns and villages with excellent health and diet'
- Key themes within the health profile are 'older', 'elderly'
- Population projections show that the population is expected to grow by 0.9 million people between 2008 and 2033

3.1 Introduction

Understanding the market for healthcare provision is a key means of starting to understand the demand for employment and skills in the health sector. A range of organisations are therefore seeking to understand more about the well-being of the United Kingdom's population; these include Public Health Observatories as well as providers of local healthcare.

3.2 Health Profile

The general trends in healthcare and healthcare provision are played out very differently throughout the regions and subregions of England.

CACI's health and consumer ACORN profiles (A Classification of Residential Neighbourhoods) is one commercially available source of data profiling the demand of healthcare in the UK². This profile provides us with a snapshot of current and possible future health requirements.

Health ACORN classifies households into four main health groups. These are:

² These draw extensively from official sources of intelligence, such as the annual population survey, 2001 Census, consumer surveys and expenditure data. These sources enable models of healthcare and consumer demand to be developed on a local, regional and country basis.

- Existing problems – where the levels of illness are above average. The proportion of people with angina is 60% higher than average, the proportion who have suffered a heart attack is 45% above average. The incidence of diabetes, high blood pressure and high cholesterol are also above average; this is the only group where this is the case.
- Future problems – the areas classified as harbouring future problems do not generally have high incidence of existing illnesses. Exceptions to this are depression, asthma and migraine.
- Possible future concerns – these are areas with lower levels of smoking, obesity and average or slightly below average incidence of illness.
- Healthy – the healthy areas tend to have a younger demographic and the proportions of people with high blood pressure, angina, diabetes and high cholesterol are lower than average. This group are likely to take more exercise and less likely to be smokers or overweight.

These four main groups are refined into a further twenty-five health types which provide more explanation of household composition, work position, lifestyle and diet. Examples include:

- older couples, traditional diets, cardiac issues
- disadvantaged elderly, poor diet, chronic health

Table 1 details the health profile for the East Midlands by the four main health groups and draws comparison to England.

1. East Midlands Health Profile

	East Midlands		England	
	Data	%	Data	%
Existing Problems	609,179	13.6	7,011,380	13.5
Future Problems	562,476	12.5	6,231,293	12.0
Possible Future Concerns	1,464,734	32.6	18,174,048	35.0
Healthy	1,809,729	40.3	19,987,231	38.5
Unclassified	44,772	1.0	479,950	0.9
Total	4,490,890		51,883,902	

Source: CACI, 2009

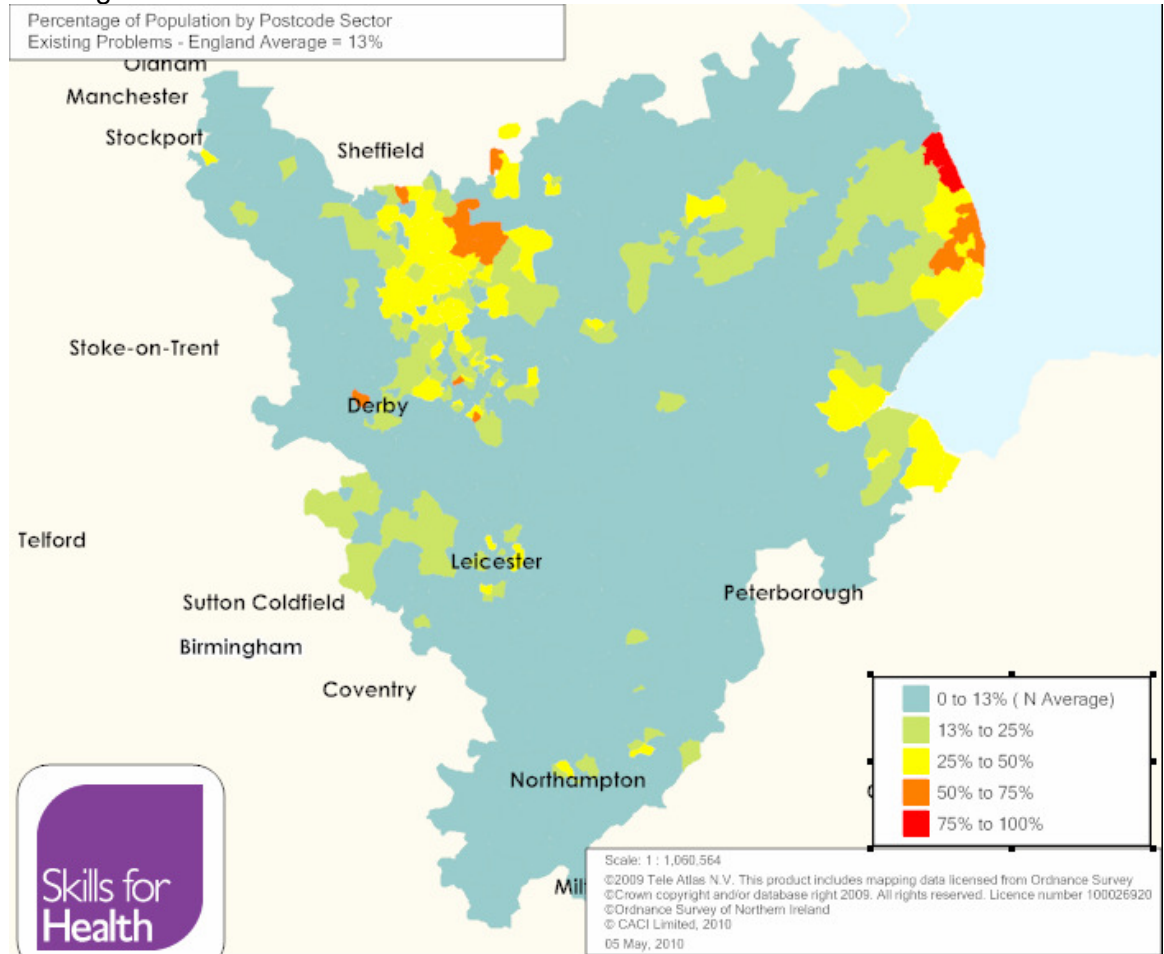

3.3 Geographical Profile for the East Midlands

Within the East Midlands the smallest groups are 'existing problems' and 'future problems', but with the same proportions as the average for England. Of the thirteen types that make up these two groups, seven are

overrepresented in the region but with some types having a minimal significance.

The following map depicts postcode sectors where existing problems are higher than the average for England. The average for England is 13% but as the map illustrates, there are pockets of households where the percentage is significantly higher.

Existing Problems Profile

Source: CACI 2009

A detailed health profile for the East Midlands can be found in Appendix 1.

3.4 East Midlands Population Projections

Predicted changes in the population of the region have a double impact on the health sector. Demographic pressures of an ageing population will increase demand for health services, whilst a potentially dwindling labour pool will mean that employers may struggle to supply the labour and skills needed to deliver the services the population needs.

Please refer to heading 5.6.1 to see how the ageing population could impact the health service provision. The charts and tables that follow contain population projections by age group for the region.

Population projections from the Office for National Statistics³, published on 27 May 2010, show that the population is expected to grow by 0.9 million people between 2008 and 2033. Growth in absolute numbers is expected in all age groups but the population aged over 60 will grow at a faster rate than those under 60 years of age.

1 Total Population Changes by Age Group 2008 – 2033

Source: Office for National Statistics Subnational Population projections (SNPP) for England, 2008

Table 2 and Chart 2 show these age groups as a proportion of the total population of the region. These clearly show that there is anticipated to be significant shifts in the proportion of the population of the East Midlands aged 60 years and over and decreases in the proportion of the population aged under 60.

³ Office for National Statistics Subnational Population Projections (SNPP) for England www.statistics.gov.uk/snpp

2. Population Changes by High Level Age Bands as a Proportion of the Total Population

		Time Period					
		2008 to 2013	2013 to 2018	2018 to 2023	2023 to 2028	2028 to 2033	Total Change 2008 to 2033
Age Group	under 20	-0.9	-0.3	0.2	-0.3	-0.5	-1.8
	20-39	-0.3	0.3	-0.7	-0.9	-0.7	-2.4
	40-59	0.0	-1.1	-1.2	-0.8	-0.1	-3.3
	60 and over	1.2	1.2	1.8	2.0	1.3	7.4

4 The Labour Market in the East Midlands

Key Features

- A total of 1.9 million people are employed across all industry sectors in the East Midlands
- The unemployment rate (in those aged 16 plus) as at February – April 2010 was 7.2%
- 12% are employed in human health and social work activities
- Wholesale and Retail Trade is the biggest employer

4.1 Introduction

The current economic recession has had a significant impact on the East Midlands labour market. There has been significant turmoil within the labour market since 2008. The unemployment rate (in those aged 16 plus) as at February – April 2010 was 7.2%; this was a small decrease of 0.2% on the previous 12 months.

An examination of claimant counts in May 2010 shows a decrease in total claimants within the region but a continued increase in those claiming for 12 months or more. The number of individuals claiming for 12 months or more has risen from 8,500 in May 2009, to 20,400 in May 2010⁴. This is the second-highest increase in percentage terms of any region of England.

4.2 Employment by Industry Sector

Table 3 shows employee numbers by industry (ABI Employee Analysis). The data shows the region is dominated by wholesale and retail trade, manufacturing and human health and social work activities.

⁴ Office for National Statistics: Labour Market Statistics June 2010
<http://www.statistics.gov.uk/statbase/Product.asp?vlnk=15084>

Human health and social work activities account for 12% of the labour market. Throughout the regions this ranges from 9%-14%.

3. East Midlands Industry Sector 2008

Industry	East Midlands	
	Data	%
A : Agriculture, forestry and fishing	19,300	1
B : Mining and quarrying	5,000	<1
C : Manufacturing	271,900	14

5 The Size and Structure of the Health Sector in the East Midlands

Key Features

- There are 129,300 people employed in the health sector in the East Midlands
- The East Midlands accounts for 8.5% of the England health sector workforce
- The health sector accounts for 6.8% of the region's employment. Subregionally the percentage ranges from 2%-12%
- There is 1 health employee for every 34 people resident in the region and 1 health establishment for every 1,167 resident population. Subregionally this ratio ranges from 1 employee for every 15 up to 131 people and 1 establishment for every 975 up to 1,615 people
- The Independent Sector accounts for approximately 22% of the total health sector workforce

5.1 Introduction

From the East Midlands health profile, Table 1, we can see that 13.6% of the region has existing health problems. With those indicating 'possible future concerns' standing at 32.6%, will the health sector have the skills and resources to meet this potential increase in demand?

The following section looks at the size and structure of the health sector in the East Midlands.

5.2 Size of the Health Sector Workforce

Table 4 details the size of the sector in each of the Government Office Regions. In the East Midlands the health sector employs 129,300 people, accounting for 8.5% of the England workforce.

In the region, employment in the health sector accounts for 6.8% of the total workforce, but this varies greatly at a subregional level. Please refer to Table 5 for a breakdown at Local Authority level.

4. Health Employment by Government Office Region

	Health Employees	Regional Percentage of Total Health Employment	Percentage of Health Employment in Total Economy
East of England	144,900	9.5	6.1
East Midlands	129,300	8.5	6.8
London	226,500	14.8	5.4
North East	81,900	5.4	7.9
North West	220,600	14.4	7.3
South East	240,100	15.7	6.4
South West	159,000	10.4	7.1
West Midlands	158,000	10.3	6.7
Yorkshire and The Humber	169,400	11.1	7.6
England	1,529,700		6.6

Source: Annual Business Inquiry employee analysis (SIC 2007)
ONS Crown Copyright Reserved [from Nomis]. Figures rounded to nearest hundred.

5.3 Health Employment at a Subregional Level

Table 5 shows the size of the health sector workforce as a percentage of the total workforce within each of the Local Authorities⁵ and potentially indicates which subregion will feel the anticipated reductions in funding more strongly. Within Derby 12% of the workforce is employed within the sector, compared to 2% in Leicestershire and Rutland.

5. Health Sector Workforce as a Percentage of the Local Workforce

Local Authority: county/unitary	Health	Percentage of workforce employed in Health
Derby	13,700	12
Derbyshire	14,900	5
Leicester	16,800	11
Leicestershire	7,500	2
Lincolnshire	19,100	7
Northamptonshire	20,400	6
Nottingham	19,300	11
Nottinghamshire	17,200	6
Rutland	300	2
Total	129,300	7

Source: Annual Business Inquiry 2008 (SIC 2007)

⁵ Total employed figures are aggregates from which farm agriculture (SIC class 0100) have been excluded

5.4 Workforce Growth in the Health Sector and the Economy

In England the workforce remained stable over the period 2007–2008. However, this was not the case at a regional level. Table 6 shows the percentage of change experienced at a regional level in the health sector workforce and the local workforce.

Between 2007 and 2008, the East Midlands saw an increase in the health workforce of 3.4%, but a slight decline of 0.3% in the regional economy.

6. Regional Growth in Employment

	2007	2008	Percentage Growth in Health Workforce	Percentage Growth in Regional Workforce
East of England	151,800	144,900	-4.5	1.0
East Midlands	125,100	129,300	3.4	-0.3
London	228,100	226,500	-0.7	1.7
North East	78,900	81,900	3.8	0.4
North West	220,900	220,600	-0.1	-1.2
South East	239,900	240,100	0.1	0.7
South West	162,000	159,000	-1.9	-0.1
West Midlands	163,000	158,000	-3.1	-0.4
Yorkshire and The Humber	160,800	169,400	5.3	-0.3
England	1,530,400	1,529,700	0.0	0.3

Source: Annual Business Inquiry employee analysis (SIC 2007)
ONS Crown Copyright Reserved [from Nomis]

5.5 Health Employment by Local Authority

Table 7 shows the numbers of health sector employees (latest 2008 estimates SIC 86) by Local Authority. The high concentrations reflect both population and regional centres for specialist services.

Within the East Midlands, Northamptonshire contains 16% of the total health sector workforce, providing care to 15% of the population. Leicestershire, however, has only 6% of the workforce providing care to 15% of the resident population.

7. Health Sector Employees by Local Authority, 2008

Local Authority: county/ unitary	86: Human health activities		Population Estimates	
	Data	%	Data	%
Derby	13,700	11	239,200	5
Derbyshire	14,900	12	762,100	17
Leicester	16,800	13	294,700	7
Leicestershire	7,500	6	645,800	15
Lincolnshire	19,100	15	698,000	16
Northamptonshire	20,400	16	685,000	15
Nottingham	19,300	15	292,400	7
Nottinghamshire	17,200	13	776,500	18
Rutland	300	<1	39,200	1
Total	129,300	100	4,433,000	100

Source: Annual Business Inquiry employee analysis (SIC 2007)

5.6 Ratio of Health Establishments and Employees

Table 8 shows the ratio of health establishments and employees to the region's resident population. A high ratio could be indicative of easier access to services and regional variations in health system structures. This table is subject to future debate.

Within the East Midlands there is 1 health employee for every 34 people and 1 health establishment for every 1,167 people.

These figures can vary dramatically within the region, ranging from 1 employee to every 15 people up to 131 people and 1 establishment for every 975 people up to 1,615 people. Please refer to Appendix 2 for subregional analysis.

8. Ratio of Health Establishments and Employees to Resident Population, 2008

	Population		Ratio of 1 Health Data Unit to Resident Population	Ratio of 1 Health Employee to Resident Population
	Mid Year 2008 Estimates	%		
East of England	5,728,700	11.1	1,219	40
East Midlands	4,433,000	8.6	1,167	34
London	7,619,800	14.8	1,003	34
North East	2,575,500	5.0	1,288	31
North West	6,875,700	13.4	1,127	31
South East	8,380,100	16.3	1,048	35
South West	5,209,200	10.1	1,108	33
West Midlands	5,411,100	10.5	1,258	34
Yorkshire and The Humber	5,213,200	10.1	1,303	31
England Total	51,446,200		1,138	34

Source: Annual Business Inquiry employee analysis SIC 2007

5.6.1 Impact of an Ageing Population

By 2033, the proportion of the population aged 50 years and over is projected to grow by 5.9%. With the current workforce estimates what will be the anticipated demand on the health sector?

Tables 9 and 10 detail the current ratio provision for the population aged 50 years and over and apply the current provision to projected population numbers. We acknowledge that there are far more sophisticated methods and models for forecasting, but have included the following analysis as an indication.

For the East Midlands, using latest estimates, there is currently 1 health establishment for every 412 resident population aged 50 years and over. Using population projections, and assuming there is minimal growth in the health sector, this ratio could increase to 1 establishment to every 578 people.

In terms of patient care, using the current estimates, there is 1 health employee to every 12 resident population aged 50 years and over. Again using the population projections, by 2033 this ratio will have increased to 1 employee for every 17 resident population aged 50 years and over.

9. Ratio of Health Establishments and Employees to Resident Population Aged 50 Years and Over, 2008

	2008 Population	Ratio of 1 Health Data Unit to Resident Population	Ratio of 1 Health Employee to Resident Population
	% 50 years and over		
East	35.6	434	14
East Midlands	35.3	412	12
London	25.7	259	9
North East	36.1	464	11
North West	34.8	392	11
South East	35.3	369	12
South West	38.5	427	13
West Midlands	34.8	438	12
Yorkshire and The Humber	34.1	445	11
England Total	34.0	387	11

10. Ratio of Health Establishments and Employees to Projected Population Aged 50 Years and Over, 2033

	Projected 2033 Population	Ratio of 1 Health Data Unit to Resident Population	Ratio of 1 Health Employee to Resident Population
	% 50 years and over		
East	41.5	629	20
East Midlands	41.2	578	17
London	29.8	361	12
North East	40.7	576	14
North West	39.6	485	13
South East	41.5	521	17
South West	43.9	590	17
West Midlands	39.3	559	15
Yorkshire and The Humber	37.8	595	14
England Total	39.1	525	16

Source: Office for National Statistics Subnational Population projections (SNPP) for England, 2008

5.7 Health Establishments by Sizeband

In the East Midlands, health establishments account for 8.4% of the total health establishments for England. In the region, health establishments account for 2.2% of all establishments.

11. Health Establishments by Government Office Region

	Health Data Units	Regional Percentage of Total Health Units	Percentage of Health Units in Total Economy
East of England	4,700	10.4	1.9
East Midlands	3,800	8.4	2.2
London	7,600	16.8	1.9
North East	2,000	4.4	2.7
North West	6,100	13.5	2.4
South East	8,000	17.7	2.0
South West	4,700	10.4	2.1
West Midlands	4,300	9.5	2.1
Yorkshire and The Humber	4,000	8.8	2.2
England	45,200		2.1

Source: Annual Business Inquiry 2008 (SIC 2007)

Table 12 indicates that the health sector is dominated by micro-establishments. Within the East Midlands, 63% of the total health establishments fall within the sizeband 1 -10 employees. Throughout the regions this ranges from 60%-76%. This sizeband will largely consist of medical and dental practices and other human health activities by independent, public and voluntary providers.

12. Size and Structure of the Health Sector Compared to all Sectors, 2008

	Data Units			Employees		
	Health Sector		Total Economy %	Health Sector		Total Economy %
	Data	%		Data	%	
1-10 employees	2,400	63	84	9,400	7	21
11-49 employees	1,100	29	12	25,700	20	25
50-199 employees	200	5	3	20,000	15	24
200 or more employees	100	3	1	74,300	57	30
Total	3,800	100	100	129,300	100	100

Source: Annual Business Inquiry 2008 (SIC2007)

5.8 Subsector Activity

In analysing data for the Skills for Health footprint, Standard Industrial Classification (SIC) codes are used. The most recent SIC codes that have been developed are SIC 2007.

The industrial classification 86, 'Human Health', is made up of five subsectors that define the activities across the health sector. The definitions for each subsector can be found in the Glossary.

Table 13 further supports the analysis in Table 12 that the sector is dominated by the primary care providers in terms of establishments, i.e.

dental and medical practices, but in terms of employee numbers, 61% of the workforce is employed within secondary care, i.e. hospital activities.

On a regional level, the East Midlands have one of the lowest proportions of establishments within ‘hospital activities’ but the highest within ‘other human health activities’.

13. Health Sector by Activity, 2008

	Data Units		Employees	
	Data	%	Data	%
8610: Hospital activities	400	11	78,600	61
8621: General medical practice activities	1,200	32	16,900	13
8622: Specialist medical practice activities	100	3	600	<1
8623: Dental practice activities	700	18	4,700	4
8690: Other human health activities	1,400	37	28,400	22
Total	3,800		129,300	

Source: Annual Business Inquiry workplace analysis (SIC 2007)

5.9 Public and Independent Sector

Healthcare is delivered through private and public providers, the public sector being a combination of NHS and Voluntary⁶.

Using annualised Labour Force Survey data we can estimate in the East Midlands the independent sector accounts for 22% of the total health workforce, of which 55% are employed in hospital activities. It is important to note that the percentages are not definitive as employees can work in both, if not all three, sectors.

14. Public and Independent Sector

East Midlands	Independent		Public		Total	
	Data	%	Data	%	Data	%
86.10 Hospital activities	19,042	12	88,609	57	107,651	69
86.21 General medical practice	3,116	2	11,541	7	14,657	9
86.22 Specialist medical practice	2,293	1	433	<1	2,726	2
86.23 Dental practice activities	3,564	2	1,527	1	5,091	3
86.90 Other human health activities	6,439	4	18,470	12	24,908	16
Total	34,454	22	120,580	78	155,033	100

Source: Labour Force Survey 2009 4 Quarter Average

⁶ Definition used by the Labour Force Survey

6 Workforce Characteristics

Key features

- The health sector is highly feminised – 81% of the workforce are female compared to 49% in the local economy
- Part-time workers account for 44% of the workforce compared to 32% in the local economy
- The total employed in age band 16-24 years is less than half of those employed in the whole economy
- Half of the workforce are aged between 45-64 years
- 57% of the health workforce are qualified to NVQ Level 4 and above compared to 30% in the local economy

6.1 Introduction

The following section breaks down the healthcare workforce to its component parts. The purpose of this is, where relevant, to highlight any differences when comparing the workforce of the whole economy and the health sector in the East Midlands and England.

6.2 Age Profile

The age profile of the existing workforce is essential to workforce planning when factoring in the demand for replacement.

The total employed in age band 16-24 years is less than half of those employed in the whole economy in the East Midlands and in England. This is most likely due to the time taken to qualify for specialist roles.

Half of the healthcare workforce is aged between 45 and 64 years.

15. Age Profile

	East Midlands		England	
	Health %	Whole Economy %	Health %	Whole Economy %
16-24 years	5	14	6	13
25-34 years	17	19	20	22
35-44 years	27	25	28	25
45-54 years	32	23	28	23
55-64 years	18	15	16	14
65 years and over	1	3	2	3

Source: Labour Force Survey 2009 4 Quarter Average

6.3 Gender Profile

The health sector is a highly 'gendered' sector with the majority of roles being taken by women. Using the latest estimates from the Annual Business Inquiry we can see

- Gender ratio: female 81% (49% in the whole economy)/male 19% (51% in the whole economy)
- 44% of the workforce are part-time (throughout the regions this ranges from 31- 49%) compared to 32% in the local economy
- Of the part-time workforce (44%) only 4% are male

16. Gender and Employment Status Profile

	East Midlands			
	Health	%	Whole Economy	%
Male Full-Time Workers	19,500	15	820,100	43
Male Part-Time Workers	5,400	4	152,300	8
Female Full-Time Workers	53,500	41	466,500	25
Female Part-Time Workers	51,000	39	452,300	24
Male	24,900	19	972,400	51
Female	104,500	81	918,800	49
Full-Time Workers	73,000	56	1,286,700	68
Part-Time Workers	56,400	44	604,600	32
Total	129,300	100	1,891,300	100

Source: Annual Business Inquiry 2008

6.4 Ethnicity Profile

There is a greater diversity of ethnicity in the health sector workforce than the whole economy. This is a pattern that is repeated across England.

17. Ethnicity Profile

	East Midlands		England	
	Health %	Whole Economy %	Health %	Whole Economy %
White	89	92	85	90
Non-White	11	8	15	10

Source: Labour Force Survey 2009 4 Quarter Average

6.5 Highest Qualification Held Profile

The health sector is highly qualified, with 57% of the health sector workforce of the East Midlands holding qualifications equivalent to NVQ Level 4 and above (throughout the regions this ranges from 57%-65%). This is slightly lower than the average across the sector in England (60%) but significantly higher than the workforce across all sectors of the East Midlands (30%).

The differences in those qualified to Levels 2 and Levels 4 of the East Midlands and the English health sector could be accounted for by the focus across the health sector on developing assistant practitioners, and the extended career opportunities that these roles create. The region still has a challenge, however, in that it has 3% of the sector holding no qualifications at all.

18. Highest Qualification Held

	East Midlands		England	
	Health %	Whole Economy %	Health %	Whole Economy %
NVQ Level 4 and above	57	30	60	35
NVQ Level 3	12	21	11	18
NVQ Level 2	16	19	12	18
Below NVQ Level 2	8	14	8	13
Other qualifications	5	8	6	9
No qualifications	3	8	3	7

Source: Labour Force Survey 2009 4 Quarter Average

6.6 Major Occupation Group Profile

The majority of the workforce can be found in Associate Professional and Technical and Personal Services occupations. This is not surprising given the nature of the health sector.

Associate Professional and Technical include nurses, therapists and midwives etc. whilst Personal Service occupations include nursing auxiliaries, nursery nurses etc.

19. Major Occupation Profile

	East Midlands		England	
	Health %	Whole Economy %	Health %	Whole Economy %
1 Managers and Senior Officials	7	16	7	16
2 Professional occupations	13	12	17	14
3 Associate Professional and Technical	37	12	38	15
4 Administrative and Secretarial	16	10	14	11
5 Skilled Trades Occupations	1	11	1	10
6 Personal Service Occupations	20	9	18	9
7 Sales and Customer Service Occupations	1	7	0	7
8 Process Plant and Machine Operatives	0	9	1	7
9 Elementary Occupations	4	12	4	11

Source: Labour Force Survey 2009 4 Quarter Average

7 Skills Gaps, Skills Shortages and Provision of Training

Key Features

- 19% of health establishments report skills gaps in their current workforce
- The main areas of skills gaps reported within the East Midlands are technical, practical or job specific skills and team working
- 88% of health establishments have provided training in the past 12 months
- 44% of the health sector workforce qualified to NVQ Level 4 and above report having received training in the past 13 weeks compared to 26% of those qualified to below NVQ Level 2

7.1 Introduction

The National Employers Skills Survey 2009 (NESS 2009) for England is the latest in a series of employer surveys conducted since 2003. The survey, from the UK Commission for Employment and Skills and its partners, provides robust and reliable information from employers in England on recruitment difficulties, skills deficiencies, and workforce development to help in the development of policy and influence actions to address skills issues.

In comparison with the previous surveys the NESS 2009 shows that there has been a marked increase in skills gaps across the health sector, with the proportion of employers reporting skills gaps increasing from 16% to 22%. The proportion of employers reporting skills shortages has however remained stable at 4% and the proportion reporting vacancies has reduced from 24% in 2007 to 20% in 2009.

These findings are consistent with the changes across the labour market that are expected at times of recession, although it should be noted that those sectors with a strong public sector presence, such as health, have reported higher levels of activity around vacancies and recruitment than sectors dominated by the private sector. This may indicate that at the time of the survey the health sector may not have felt the full effects of the recession.

7.2 Skills Gaps and Shortages

Skills gaps are said to exist at an establishment when the employer indicates that staff at the establishment are not fully proficient at their jobs. The number of skills gaps refers to the number of staff not fully proficient.

Table 20 shows that skills gaps across the East Midlands affect a slightly lower proportion of employers, but a higher proportion of employees than the average across the sector as a whole within England. This may be indicative of skills gaps being concentrated in large employers, but more analysis would be necessary in order to draw firm conclusions.

20. Establishments with Skills Gaps by Region

Region	% with skills gaps	
	Establishments	Employees
East of England	23	6
East Midlands	19	15
London	18	5
North East	21	5
North West	23	3
South East	23	13
South West	25	10
West Midlands	24	8
Yorkshire and the Humber	21	7
England Average	22	8

Source: NESS, 2009
Base: Column 2 - All establishments and Column 3 - All employees

The 2009 National Employers Skills Survey for England⁷ shows that the main areas of reported skills gaps within the East Midlands are:

- Technical, practical or job specific skills (53%)
- Team working (53%)

Chart 3 shows a comparison of the skills that health sector employers in the East Midlands highlight as needing to be improved compared with the averages for the sector across England.

⁷ National Employer Skills Survey 2009, Data Site <http://researchtools.lsc.gov.uk/ness/itab/default.asp>

3 Skills That Need Improving

Source: NESS, 2009
Base: All Establishments

7.3 Vacancies within the Health Sector

The National Employers Skills Survey for England provides an overview of vacancies at a sectoral level, including hard-to-fill vacancies and skills shortage vacancies.

The latest survey shows that a higher proportion of establishments in the health sector report vacancies, and at a sectoral level the health sector report the highest level of hard-to-fill vacancies.

Table 21 shows the proportion of employers reporting vacancies, hard-to-fill vacancies and skill shortage vacancies.

21. Vacancies, Hard-to-Fill Vacancies and Skill Shortage Vacancies

	Health Sector	Whole Economy
% of all employers reporting vacancies	20	12
% of all employers reporting hard-to-fill vacancies	7	3
% of employers reporting Skill Shortage Vacancies	4	4

Source: NESS, 2009
Base: All establishments

Table 22 shows the percentage of all employers in the health sector reporting vacancies at a regional level.

22. Employers Reporting Vacancies in the Health Sector

	% of Employers reporting vacancies	
	Health Sector	Whole Economy
East of England	23	12
East Midlands	23	11
London	18	14
North East	20	12
North West	17	11
South East	21	13
South West	21	12
West Midlands	19	11
Yorkshire and the Humber	18	12
England Average	20	12

Source: NESS, 2009
Base: All establishments

The figures for hard-to-fill vacancies and skill shortage vacancies are not available at a regional level due to low baselines, however, an indication of vacancies at occupational level gives us an indication of high vacancy rates and specific occupations experiencing higher turnover or difficulties.

7.4 Jobcentre Plus Vacancies and Claimant Count

Based on 27 occupations, in May 2010, 600 people claiming Job Seekers Allowance (JSA) were actively looking for a job in the health sector. In the same period 943 health vacancies were being advertised at Jobcentres⁸ throughout the East Midlands.

⁸ All adverts for vacancies with an Agenda for Change salary band of 1-5 (inclusive) are fed directly to Jobcentre Plus. From February 2009 NHS Jobs updated the vacancy feed to Jobcentre Plus advisers to additionally include All Administrative and Clerical vacancies in pay bands 6 and 7 and all Estates and Ancillary vacancies in pay bands 6 and 7. www.nhsemployers.org/RecruitmentAndRetention/nhs-jobs/Pages/NHS-Jobs-and-Jobcentre-Plus.aspx

Local Authorities where vacancies significantly exceed numbers of jobseekers are Leicester, Northamptonshire and Nottinghamshire. Please refer to the table in Appendix 3.

Occupations where the number of vacancies advertised exceeds those being sought by registered job seekers are Nurses, Pharmaceutical dispensers and Nursing auxiliaries and assistants. However, this is not a true reflection of the labour market, as sought occupation figures only accounts for those currently registered as unemployed and does not take into account people who are in current employment in other sectors seeking entry into the health sector. Please refer to the table in Appendix 3.

Chart 4 shows from January 2010 the steadily decreasing number of Job Seekers looking for employment within the health sector. Health sector vacancies, however, have fluctuated throughout 2009/10 with a sharp upward turn from April 2010.

4 Jobcentre Plus Vacancies Compared to Health Sought Occupations

Source: Nomis

7.5 Skills Supply

Key to the supply of skills across any sector is high quality training and development led by employer demand. If this is achieved there should be a greater balance between the demand and supply of skills. NESS 2009 shows that the health sector experiences high levels of training compared to the whole economy.

Table 23 shows that 88% of health sector establishments in the East Midlands report that they have provided training for their employees in the preceding 12 months compared to 67% in the local economy.

23. Establishments Providing Training by Region

Region	% of establishments that have provided training (on or off the job) in the preceding 12 months	
	Health Sector	Whole Economy
East of England	89	66
East Midlands	88	67
London	82	66
North East	91	69
North West	87	67
South East	84	70
South West	83	71
West Midlands	82	68
Yorkshire and the Humber	85	65
England Average	85	68

Source: NESS, 2009
Base: All establishments

7.6 Training in the last 13 weeks

There is also a general pattern across all sectors that more highly qualified staff receive more training than those with lower level qualifications. This pattern is seen across the health sector with Table 24 showing that those individuals qualified to NVQ Level 4 and above (44%) are almost twice as likely to report having received training in the last 13 weeks as those qualified to below NVQ Level 2 (26%). Estimates at a regional level should be interpreted with caution due to sample sizes.

24. Percentage of the Health Sector Workforce That Have Received Training in the Last 13 Weeks Split by Qualification Level

	East Midlands %	England %
NVQ Level 4 and above	44	45
NVQ Level 3	29	33
NVQ Level 2	31	31
Below NVQ Level 2	26	25
Other qualifications	30	29
No qualifications	5	14

Source: Labour Force Survey 2009 4 Quarter Average

These figures can be broken down further to look at specific staff groups. In doing this we have taken the largest 25 staff groups across England from the Labour Force Survey 2009 and separated the staff groups into the following:

- those with a high qualification profile (where 75% of the people in the staff group are qualified to NVQ Level 4 and above)
- those with a low qualification profile (where at least 35% of the workforce are qualified to below NVQ Level 2)
- those with a mixed qualification profile

Table 25 shows the estimated percentage of the workforce in each staff group that have received training in the last 13 weeks. In general we can see that those with the highest qualifications receive more training, and those in clinical roles receive more training than those in non-clinical roles. This is not surprising given the regulatory requirements of clinical roles and the need for clinical skills to be maintained.

25. Percentage of the Workforce in Each Staff Group That Have Received Training in the Last 13 Weeks

	East Midlands %	England %
3212 Midwives	67	50
2215 Dental practitioners	88	48
2211 Medical practitioners	44	52
3222 Occupational therapists	55	51
3211 Nurses	47	47
3221 Physiotherapists	27	46
2112 Bio scientists and biochemists	46	44
2212 Psychologists	53	40
3214 Medical radiographers	24	46
1181 Hospital and health service managers	40	43
3229 Therapists n.e.c.	34	40
Non-clinical		
6113 Dental Nurses	47	43
1183 Healthcare practice managers	10	31

8 Projections of Future Levels of Employment in the Health Sector

Key Features

- The health sector across the East Midlands is predicted to grow by 18,000 people between 2007 and 2017. These estimates were created prior to the economic downturn and tighter public spending and should therefore be treated with extreme caution
- 60,000 people are predicted to retire from the sector between 2007 and 2017, this represents an opportunity for employers to reshape their workforce

8.1 Introduction

Working Futures III 2007-2017⁹ is an econometric forecast of changes to employment and skills needs between 2007 and 2017. It seeks to model the impact of technological change, changes in government policy, economic conditions and other social drivers for the UK labour market, including the health sector.

These forecasts for future employment in the sector were produced prior to the recession which began in 2008. The effect of this and tighter public spending will almost certainly mean that these forecasts of expansion are now overstated. Set against a backdrop of tighter public spending, and the dominance in terms of employee numbers of the NHS across the sector, it is unlikely that the sector will experience any significant growth over the short to medium term.

The forecasts do however provide an interesting analysis of estimated numbers of workers that will retire between 2007 and 2017. These figures indicate that an average of 6,000 employees will leave the sector every year across the region. Employers may therefore wish to examine what opportunities this presents for them to reshape their workforce through systematic workforce and succession planning activities.

⁹ Working Futures 2007-2017, Institute for Employment Research, University of Warwick, December 2008

8.2 Changes in the Workforce by Main Occupational Group

The health sector across the East Midlands is predicted to grow by 18,000 people (11.9%) between 2007 and 2017; this is consistent with the 11.8% growth predicted for the health sector across England. It is further predicted that the region and its employers will need to recruit an additional 77,000 people between 2007 and 2017 to fill these new jobs and replace existing workers that will retire or leave the sector.

Table 26 provides an overview of the expansion and net requirement for workers across the sector by occupation groups. The largest expansion in absolute numbers of workers is predicted in the Caring Personal Services Occupations group, which includes nursing auxiliaries and nursery nurses. This represents growth within this group by approximately 23%. The largest expansion in percentage terms is found within the Corporate or Senior Managers group at almost 33%. Again there should be caution here given the timing of the projections and the tighter fiscal environment across the sector.

26. Changes in the Workforce Across the Sector by Main Occupation Group 2007 - 2017

	2007 (000s)	2017 (000s)	Estimated Growth 2007-2017 (000s)	Estimated Retirements 2007-2017 (000s)	Net Requirement* 2007-2017 (000s)

9 Conclusion

This regional briefing has sought to provide readers with an overview of the main employment and skills trends in the East Midlands health sector. We hope this regional briefing has been of use to you and has provided you with the insights you need.

The development of Skills and Labour Market intelligence is always an iterative process and we welcome the comments and suggestions of health sector employers and stakeholders. Please email LMI@skillsforhealth.org.uk should you wish to comment on these assessments or any other aspects of our work.

9.1 Skills and Labour Market Intelligence

Skills for Health believe that robust and reliable labour market intelligence is a vital part of the workforce planning and skills development process. We want to assist you in understanding the local, regional and national picture of skills and labour market trends and give you the confidence to make informed decisions.

We seek to enhance the understanding of current and future skills needs across the sector through a varied range of outputs that are freely available on our website.

Our products and services are suitable for a wide range of users including healthcare employers and line managers, strategic health authorities, education commissioners and careers advisors. They include:

- [Baseline Reports](#) profiling health sector skills and labour market trends within the UK, England, Scotland, Wales and Northern Ireland, and the English regions
- [Themed research](#) to address gaps in workforce knowledge and promote new ways of delivering healthcare
- [An online information tool](#) allowing you to interrogate statistics on health sector employment, skills, labour demand, training and demographics
- [Future-orientate reports](#) and seminars exploring creative approaches to the emerging healthcare workforce issues
- Bespoke searches and reports on specific themes relevant to you as an employer.

11 Appendix 2 Local Ratio of Healthcare Employees and Establishments

11.1 East Midlands Ratio of Health Employees and Establishments

Within the East Midlands there is 1 health employee for every 34 people and 1 health establishment for every 1,167 people.

At a subregional level this figure can range from 1 health establishment to every 975 people in Nottingham to 1 establishment to every 1,615 people in Leicestershire. There is no ratio figure for Rutland as there are less than a hundred establishments.

At a patient care level this ratio ranges from 1 health employee to every 15 people in Nottingham to 1 health employee for every 131 people in Rutland. These figures are both the lowest and highest employee ratio compared to any other region.

	Population		Ratio of 1 Health Data Unit to Resident Population	Ratio of 1 Health Employee to Resident Population
	Mid Year 2008 Estimates	%		
Derby	239,200	5	1,196	17
Derbyshire	762,100	17	1,089	51
Leicester	294,700	7	982	18
Leicestershire	645,800	15	1,615	86
Lincolnshire	698,000	16	1,163	37
Northamptonshire	685,000	15	1,370	34
Nottingham	292,400	7	975	15
Nottinghamshire	776,500	18	1,109	45
Rutland	39,200	1	*	131
East Midlands Total	4,433,000		1,167	34

14 Glossary

ABI The Annual Business Inquiry is a business survey which collects both employment and financial information. The ABI is based on a sample survey so estimates are subject to sampling errors which need to be taken into account when interpreting the data.

ACORN A Classification of Residential Neighbourhoods. A geodemographic classification using census and other data to classify postcodes into neighbourhood categories. The classification has been developed by the marketing-data firm CACI.

Footprint All organisations in the health sector use Standard Industrial Classifications (SIC) Human Health Activities.

In analysing data for the Skills for Health footprint SIC codes are used. The most recent SIC codes that have been developed are SIC 2007.

The codes relevant to the Skills for Health Footprint are SIC code 86 – Human Health Activities - which is comprised of the following areas:

- SIC 86.101 – Hospital activities
- SIC 86.210 – General medical practice activities
- SIC 86.220 – Specialist medical practice activities
- SIC 86.230 – Dental practice activities
- SIC 86.900 – Other human health activities

Change in Data

The SIC 2003 classification included Nursing Home Activities (excluding homes for the aged) SIC 85.113 within Hospital Activities. This has always been an area where we have known there to be significant overlap with Skills for Care and Development in respect of responsibility for the workforce however it has never been possible to disaggregate this section of the workforce within the data that we hold.

The SIC 2007 classification now splits this sub classification into Medical Nursing Home Activities under the direct supervision of medical doctors (which falls within the skills for health footprint) and several other sub classifications which now clearly fall within the footprint of Skills for Care and Development.

The net result of this split is that it appears that our overall workforce numbers across the health sector have reduced when comparing data to earlier documents but in fact this is not the case.

For a full overview of this issue please refer to the Skills for Health SIC 2007 Technical Paper which is available on the Skills for Health website.

GOR The nine Government Office Regions are the primary statistical subdivisions of England.

Great Britain Refers to the whole of England, Scotland and Wales including offshore islands. It does not include Northern Ireland, the Channel Islands or the Isle of Man.

LFS The Labour Force Survey (LFS) is a quarterly sample survey of households living at private addresses in the UK.

NESS National Employers Skills Survey for England

OAs Output Areas (OAs) are based on postcodes as at Census Day. The minimum OA size is 40 resident households and 100 resident persons, but the recommended size was rather larger at 125 households. In total there are 165,665 OAs in England

SIC The United Kingdom Standard Industrial Classification of Economic Activities (SIC) is used to classify business establishments and other standard units by the type of economic activity in which they are. For further information please visit www.statistics.gov.uk/statbase/Product.asp?vlnk=14012

SOC Standard Occupation Classification is used to define the workforce across the whole economy.

The unit group structure i.e. occupation code of the major groups, are detailed in the table below. For example, occupation codes beginning with 1 i.e. 1181 Hospital and health service manager, will be incorporated under major group 1- Managers and Senior Officials, 2211 Medical Practitioners will be incorporated under major group 2 - Professional Occupations.

Code commencing with:	Major Group	Example of Unit Groups
1	Managers and Senior Officials	1181 Hospital and health service manager 1183 Healthcare Practice Managers
2	Professional Occupations	2211 Medical practitioners 2215 Dental practitioners
3	Associate Professional and Technical Occupations	3211 Nurses, 3212 Midwives, 3213 Paramedics
4	Administrative and Secretarial Occupations	4211 Medical secretaries
5	Skilled Trades Occupations	5434 Chefs, cooks
6	Personal Service Occupations	6111 Nursing, auxiliaries and assistants 6112 Ambulance staff (excl Paramedics)
7	Sales and Customer Service Occupations	7212 Customer care occupations
8	Process, Plant and Machine Operatives	8138 Routine laboratory testers
9	Elementary Occupations	9221 Hospital porters

UK The United Kingdom is the nation state consisting of England, Scotland, Wales and Northern Ireland
